

Adjie Rizqan

Software / Full-stack Engineer

adjierizqan@gmail.com · adjierizqan.github.io · [GitHub](#) · [LinkedIn](#)

Software and full-stack engineering for operational and data-heavy applications, with applied AI and computer vision research.

Selected engineering work

LabStock / 2026

Laboratory inventory, from the source workbook to the final report. One ledger connects stock movements, corrections and Excel exports.

Product engineering · data correctness · release engineering · Next.js 16, TypeScript, PostgreSQL, Drizzle ORM, ExcelJS

Workflow: Import → ledger → report → export · Import safety: Idempotent re-import

SuhuLog / 2026

A hospital laboratory temperature-logging system for QR-based entry, exception monitoring, auditable corrections, and official monthly exports.

Product design · full-stack engineering · release engineering · TypeScript, Node.js, Express 5, SQLite, EJS, Chart.js, Nginx

Release: v1.2.3 · Quality gate: 276 automated tests

TomatoVision / 2026

A computer-vision study that detects three greenhouse tomato maturity stages and compares a YOLOv11 baseline with modified models and a three-model WBF ensemble.

Computer vision research · model development · evaluation · YOLOv11, Swin Transformer, PyTorch, OpenCV, Weighted Boxes Fusion

YOLOv11 baseline: 0.795 mAP@0.5 · Best modified model: 0.807 mAP@0.5 · Three-model WBF: 0.824 mAP@0.5 · WBF stricter metric: 0.499 mAP@0.5:0.95

BDRS / 2026

A blood-bank system of record: requests, per-bag crossmatch, issue and outcomes connected in one case workspace.

Product owner · sole developer · QA and release · Laravel 13, PHP 8.4, Inertia 3, React 19, Tailwind 4, SQLite

Recorded release: 19 September 2026 · owner UAT passed · Unit / feature suite: 2,672 passed · 74 skipped · 3 incomplete

Education

Tamkang University

Master's in Computer Science and Information Engineering · completed 2026 · thesis research: TomatoVision

Telkom University

Bachelor's / S1 Software Engineering · completed 2023

Public evidence

Full case studies, system decisions and evidence limitations: adjierizqan.github.io. Product captures use synthetic or sanitized data. Research evaluation and demo imagery are distinguished.
